

Zenith Global Inc. Control Mapping Framework (Crosswalk Matrix)

Control ID	Framework Standard	Control Description	Implemented Technical Control (Zenith Co.)	Evidence / Artifact Ref
AC-01	NIST CSF 2.0: PR.AA-01 SOC 2: CC6.1	Identities and credentials for authorized users are managed throughout their lifecycle.	HRIS (BambooHR) is integrated directly via Okta SCIM to trigger automated account creation on start date and account deactivation immediately upon status change.	EVID-AC01-OktaSCIM-Config.png
AC-02	NIST CSF 2.0: PR.AA-03 SOC 2: CC6.2	Users are authenticated using mechanisms commensurate with the risk of the action.	Okta Adaptive MFA is enforced system wide. Production infrastructure requires Web AUTH / FIDO2 security keys.	EVID-AC02-MFA-Policy-Export.json
AC-03	NIST CSF 2.0: PR.AA-05	Access permissions are managed according to the	AWS IAM roles are mapped directly to Okta Group assignments.	EVID-AC03-AWS-SCP-Policy.json

Control ID	Framework Standard	Control Description	Implemented Technical Control (Zenith Co.)	Evidence / Artifact Ref
	SOC 2: CC6.3	principle of least privilege.	Direct permission assignments to individual IAM users are prohibited via AWS SCP.	
VM-01	NIST CSF 2.0: ID.RA-01 SOC 2: CC7.1	Vulnerabilities in infrastructure and software are identified and evaluated routinely.	automated weekly vulnerability scans are scheduled across all Zenith internal and production cloud subnets.	EVID-VM01-Tenable-Schedule.pdf
VM-02	NIST CSF 2.0: RS.MI-01 SOC 2: CC7.3	Vulnerabilities are remediated within established timeframes according to severity levels.	High and Critical severity vulnerabilities automatically generate Jira Security tickets. SLAs require Critical vulnerabilities to be patched within 30 days.	EVID-VM02-Jira-Automation.png
