
ZENITH GLOBAL INC. | AUDIT EVIDENCE PACKAGE

PACKAGE REF: AUDIT-2026-Q1

AUDITOR ATTN: External SOC 2 Type II Assessment

COMPILATION DATE: July 15, 2026

COMPILED BY: Matt Watkins. GRC Analyst/ Advisor

Control 1: Access Revocation (Deprovisioning SLA)

Audit Test Plan

Objective: Verify that terminated employees have all system access revoked within the company's mandated 24-hour SLA (Zenith internal SLA target: < 2 hours).

Sampling Methodology: Select 1 random involuntary/voluntary departure from Q1 2026.

Testing Procedure: Match the HR termination notification timestamp against the Okta/Active Directory event log timestamp to measure turnaround time.

Evidence Artifact A: HR Termination Notice (Jira HR Ticket)

TICKET ID: HR-TERM-2026-0892

SUBJECT: Involuntary Termination Notice - User: J. Doe (Emp ID: ZN-4029)

REQUESTER: Sarah Jenkins (HR Director)

TIMESTAMP CREATED: 2026-02-18 14:00:00 UTC

STATUS: Processed

NOTES: Employee separation finalized at 14:00 UTC. Execute immediate account deactivation.

Evidence Artifact B: System Revocation Audit Log (Okta Event Log Export)

```
{
  "eventId": "evt_8832019482104921",
  "published": "2026-02-18T14:12:05.112Z",
  "eventType": "user.authentication.auth_via_mfa",
  "outcome": { "result": "DENIED", "reason": "User account is deactivated" },
  "actor": { "id": "00u123abc456", "type": "User", "alternateId": "jdoe@zenithco.com" },
  "target": [
    {
      "id": "app_okta_dashboard",
      "displayName": "Zenith Single Sign-On",
      "detailEntry": { "deactivationReason": "Automated SCIM sync from HRIS BambooHR ticket HR-TERM-2026-0892" }
    }
  ]
}
```

Audit Finding: HR ticket generated at 14:00:00 UTC. Account deactivation completed at 14:12:05 UTC. Total elapsed time: 12 minutes, 5 seconds. Control test passed (well within the 24-hour SLA).

Control 2: Vulnerability Management & Patching SLA

Audit Test Plan

Objective: Verify that Critical vulnerabilities (CVSS Score 9.0–10.0) identified on production servers are remediated within 30 days of discovery.

Sampling Methodology: Target high-risk vulnerability alerts from Q1 vulnerability scans.

Testing Procedure: Trace the lifecycle from initial Tenable scan discovery through remediation ticket deployment and final validation rescan.

Evidence Artifact A: Discovery Scan (Tenable.io Excerpt)

=====

SCAN ID: SC-2026-01-15-PROD
TARGET IP: 10.200.14.88 (prod-app-db-02.zenithinternal.net)
DISCOVERY DATE: 2026-01-15 03:00:00 UTC
VULNERABILITY: CVE-2026-1192 - OpenSSL Remote Code Execution
CVSS v3 SCORE: 9.8 (CRITICAL)
STATUS: OPEN / UNPATCHED

=====

Evidence Artifact B: Remediation Ticket (Jira Security)

=====

TICKET ID: SEC-2026-104
SUMMARY: Patch CVE-2026-1192 on prod-app-db-02
ASSIGNED TO: DevSecOps Operations Team
PRIORITY: Highest (SLA: 30 Days)
RESOLUTION TIMESTAMP: 2026-01-28 22:15:00 UTC
COMMIT REF: github.com/zenith-co/infra-ansible/commit/a8f192d
DEPLOYS: Ansible Patching Job #4829 successfully updated OpenSSL to v3.2.1

=====

Evidence Artifact C: Verification Rescan Report

=====

SCAN ID: SC-2026-01-29-VERIFY
TARGET IP: 10.200.14.88 (prod-app-db-02.zenithinternal.net)
RE-SCAN DATE: 2026-01-29 03:00:00 UTC

VULNERABILITY LOOKUP: CVE-2026-1192

STATUS: RESOLVED / NOT DETECTED

Audit Finding: Critical flaw discovered Jan 15, 2026. Patch deployed Jan 28, 2026; verified clear on Jan 29, 2026. Total elapsed time: 14 days. Control test passed (meets 30-day requirement).
